

## ENGINE PERFORMANCE CURVE

Rating: M2 - 425hp (317kW) @ 1900 RPM

Application: Marine

PowerTech<sup>TM</sup> 13.5L Engine

Model: 6135AFM85

## REFERENCE CONDITIONS

 Air Intake Restriction
 12 in.H<sub>2</sub>O (3 kPa)

 Exhaust Back Pressure
 30 in.H<sub>2</sub>O (7.5 kPa)

Rated speed and power

Gross power guaranteed within  $\pm 5\%$  at SAE J1995 and ISO 3046 J1995 and ISO 3046 conditions:

77 °F (25 °C) air inlet temperature 29.31 in.Hg (99 kPa) barometric pressure 104 °F (40 °C) fuel inlet temperature

104 °F (40 °C) fuel inlet temperature 0.853 fuel specific gravity @ 60 °F (15.5 °C)

Ambient air temperature is defined to be the temperature of ambient air close to operating vessel that is not influenced in any manner by operating characteristics of the vessel (free field temp).

Conversion factors:

Power:  $kW = hp \times 0.746$ 

Fuel: 1 gal = 7.1 lb, 1 L = 0.85 kg

Torque:  $N \cdot m = \text{lb-ft x } 1.356$ 

All values from currently available data. Subject to manufacturing and measurement variations and to change without notice.

Actual performance is subject to application and operation conditions outside of John Deere control.

## Notes:

Ref: Engine Emission Label

 $\it M2$ : The M2 rating is for marine propulsion applications that typically operate between 3,000-5,000 hours per year and have load factors up to 65 percent. This rating is for applications that are in continuous use and use full power for no more than 16 hours of each 24 hours of operation. The remaining time of operation is at or below cruising speed.

Possible applications: Short-range tugs and towboats long-range ferryboats, large passenger vessels and offshore displacement hull fishing boats

Designed/Calibrated to meet:	Certified by:
EPA Commercial Marine Tier 3	1
IMO MARPOL Annex VI Compliant	Alain taul
<ul> <li>NRMM (97/68/EC), as amended</li> </ul>	,

Performance Curve: 6135AFM85 B
